# Agenda

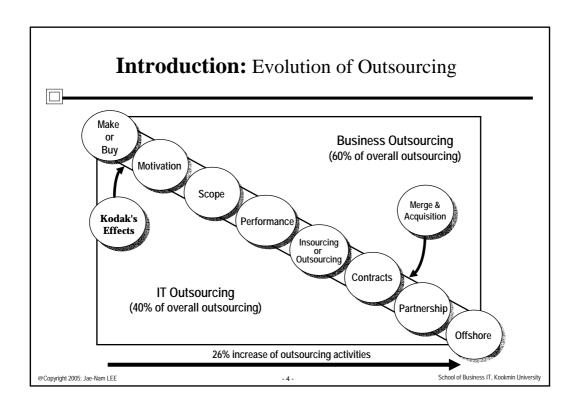

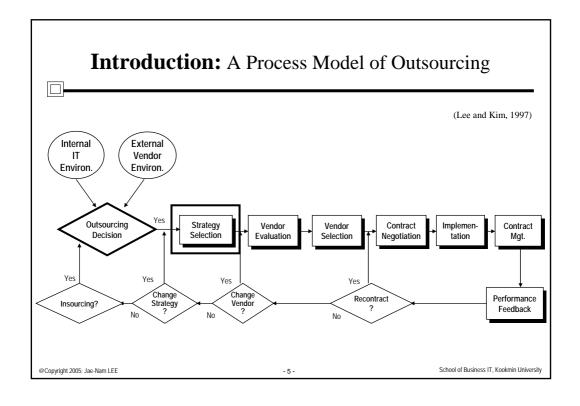

- 1. Introduction
- 2. Part I
  - 2.1 Dimensions of OS Strategy
  - 2.2 Patterns of OS Strategy
- 3. Part II
  - 3.1 Fit between OS and Org. Strategies
  - 3.2 Patterns between them
- 4. Results
- 5. Conclusion

### **Introduction:** Lack of Guidelines (1)

- ☐ Most of managers reported an unsatisfactory outcome in real outsourcing cases. Why?
  - The complexity of outsourcing transactions because outsourcing decision involve many factors (Lacity and Hirschheim, 1993)
    - Balancing the needs of different organizational functions
    - · Establishing and managing a relationship
    - Making a decision with incomplete information, etc.
  - The limited selection of models to help managers analyze outsourcing decisions and how to choose a set of outsourcing strategies (Ngwenyama and Bryson, 1999)

# Introduction: Lack of Guidelines (2)

- ☐ While some firms have achieved varying degrees of outsourcing success with any of outsourcing strategies, many have encountered significant difficulties
- ☐ How do managers design an effective outsourcing strategy that is the most appropriate for their firms?
- ☐ An incorrect outsourcing decision with insufficient thought as to strategy can result in loss of competencies and capabilities, exposure to unexpected risks, and even business failures
- > However, adequate guidelines for organizing effective outsourcing strategies do not exist.

# **Introduction:** Concept and Definition (1)

#### ☐ Organizational Strategy (Miles and Snow, 1978)

- Determination of the basic long-term goals and objectives of an enterprise, and adoption of courses of action and the allocation of resources necessary for carrying out these goals (Chandler, 1963)
- Prospector Strategy: to frequently add to and change its products and services to be the first in the market. An organization with such a strategy attempts to have innovation and flexibility to respond rapidly to changing market environment.
- Analyzer Strategy: attempts to maintain a relatively stable and limited line of products and services, while selectively moving into carefully selected new areas with demonstrated promise. Organizations in this category tends <u>to be a follower</u> rather than a leader in the market with making the balance between cost and efficiency.
- Defender Strategy: attempts to locate and maintain defined markets in a relatively stable products and services. Often this organization is not at the forefront of developments in the industry. It focuses on tight control and emphasizes operating efficiencies to lower costs.
- Reactor Strategy: An organization with this strategy tends to respond in only those areas where it is forced to by environmental pressures rather than to be aggressive in maintaining existing products and markets because it essentially lacks a consistent strategy.

# **Introduction:** Concept and Definition (2)

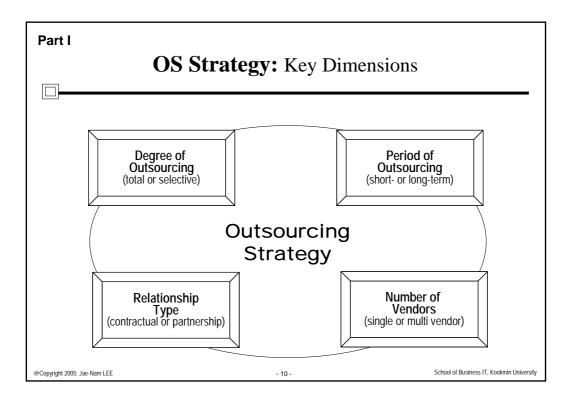

#### □ IT Outsourcing

- Act of subcontracting a part or all of an organization's IS work to external vendors (Altinkemer et al., 1994)
- Managing a firm's IT infrastructure through ... governance mechanisms with other firms (Loh and Venkatraman, 1992)

#### **□** IT Outsourcing Strategy

- The logic visible in a firm's portfolio of IT outsourcing decision (Lee et al., 2004)
- Not a single decision that is consciously made, but rather the manifestation of multiple decisions

@Copyright 2005: Jae-Nam LEE - 9 - School of Business IT, Kookmin University

# OS Strategy: Degree of Outsourcing What are the possible candidates and suitable amount of outsourcing for our organizations? Operations perspective (Ang and Straub, 1998) Functional perspective (Grover, Cheon and Teng, 1996) Budget perspective (Lacity, Willcock and Feeny, 1996) Type of Outsourcing (Loh and Venkatraman, 1991, 1992)

# **OS Strategy:** Relationship Type

- □ What kind of outsourcing relationship is appropriate for our organization?
  - Buy-in contract (Lacity and Willcocks, 1998)
  - Fee-for-service contract (Saunders, Gebelt and Hu, 1997)
  - Partnership (Klepper, 1994; McFarlan and Nolan, 1995)

@Copyright 2005: Jae-Nam LEE

- 12 -

#### Part I

# OS Strategy: Period of Outsourcing

- □ Which one is better, long- or short-term outsourcing, for our organization?
  - A long-term contract (Klepper, 1994; McFarlan and Nolan, 1995)
    - · Improves financial predictability
    - · Reduces the risk and uncertainties
  - A short-term contract allows companies to (Lacity and Willcocks, 1998)
    - · Adequately analyze the cost implications of outsourcing decision
    - Motivate vendor performance
    - · Recover faster from mistakes

@Copyright 2005: Jae-Nam LEE - 13 - School of Business IT, Kookmin University

# **OS Strategy:** Number of Vendor

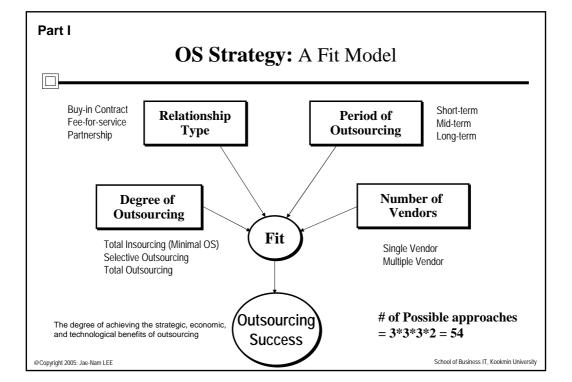

- □ Which way should we adopt, a single vendor or multi-vendor approach?
  - A multi-vendor strategy (Applegate and Nomtealegre, 1991)
    - · high vendor performance,
    - · Low switching cost and increased bargaining power
  - A single vendor strategy (Ngwenyama and Bryson, 1999)
    - Develop a strong relationship with one vendor
    - · Reduce the cost for communication and coordination activities

# Conclusion: Discussions

#### ☐ Pattern five in OS strategy exhibits the highest achievement?

- > Total outsourcing, partnership, long-term and multi-vendors
- ➤ Inconsistent with a recent study (Lacity and Willcocks, 1998)
  - Selective, short-term, and fee-for-service contract decisions achieved expected cost saving than other types of outsourcing strategies
- > The divergent result in findings may be caused by different perspective

#### ☐ However, it depends on organizational strategy

- ➤ Defender: arm's length, network strategies
- > Prospector: embedded, independent strategies
- ➤ Analyzer: embedded strategy
- > Reactor: arm's length strategy

# **Conclusion:** Implications

| Organizations should adopt an integrated outsourcing           |
|--|
| approach with their basic organizational directions to have    |
| the distinctive outcomes                                       |
| The results provide meaningful guidelines or directions for    |
| organizations that are considering outsourcing as an effective |
| outsourcing strategic decision model                           |
| Effective combinations between outsourcing strategy and        |
| organizational strategy provide organizations with a benchmark |
| against which they can compare their own combinations          |
